REMOVABLE IN GROUND SAFETY FENCE INSTALLATION INSTRUCTIONS

REQUIRED TOOLS:

Step 1.

Determine where you would like your fence using the following guidelines

- The fence must completely isolate the pool area from all exits of the house
- The pool area should be enclosed by either the removable safety fence and/or other permanent barrier such as house, fence etc.
- Do not place fence adjacent to any object or structure that would allow a child to climb over the safety fence.
- Fence should be placed far enough from edge of pool to allow pool maintenance while fence is in place.

Step 2.

Determine your starting point. If fence is to be installed in a straight line use a chalk line to insure that fence remains straight.

Step 3.

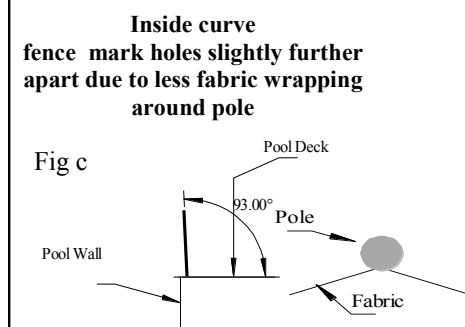

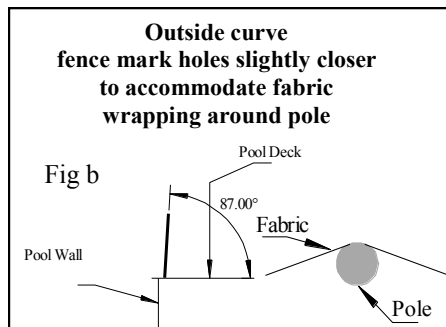

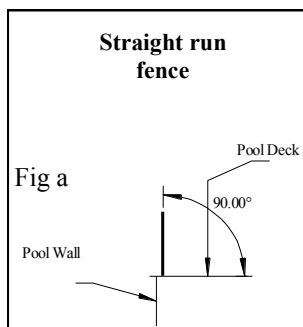

4'X12' FENCING
Mark four holes using the outside holes of the template or measuring 35 3/4" on center

5'X12' FENCING
Mark five holes using the outside holes of the template or measuring 35 3/4" on center

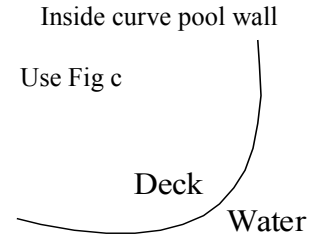

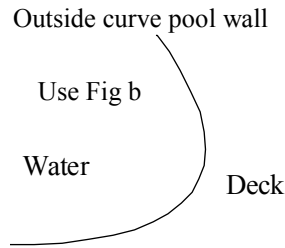

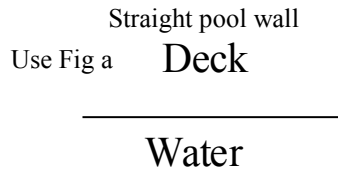

When marking holes for curved fencing, holes should be marked a 1/4" closer or further apart to take up slack.

Step 4.

With a level and a square drill the holes that have been marked per the angled guideline below.

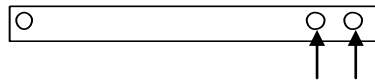

Examples to use to determine installation of pole in deck:

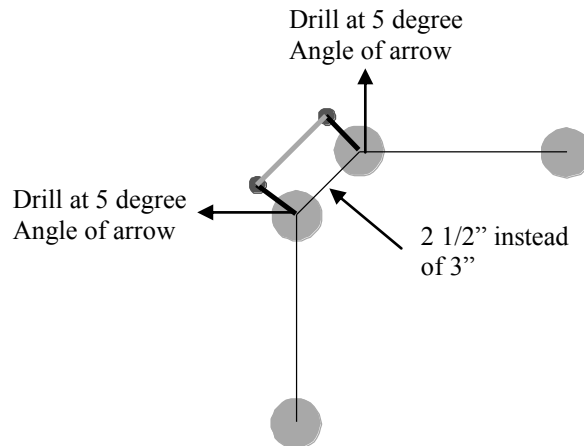

Step 5.

Clean the debris out of the holes using the shop vac then gently tap plastic deck sleeves in the holes (avoid pounding sleeves so as not to damage). If sleeves do not slide in easily re-drill the holes. For the next set of panels, use the two closest holes of template to mark distance between panels. Measurement is exactly three inches on center. Repeat steps 3 through 5 until all holes are drilled.

Step 6.

It is *not* recommended using 90 degree corners, if it is necessary, maximize the strength of the fence by not using a single panel. A 90 degree corner can be made by placing 2 panels at right angles and angling the poles away from each other at a 5 degree angle.

Step 7.

It may be necessary to use special width panels in certain installations. To make special panels follow the directions below.

1. Determine panel length required.
2. Use a scissors or utility knife, cut fabric to at least 4" more than desired length.
3. Utilizing any extra pole, remove trim from pole using a screw driver with a 1/4" hex head.
4. Mark desired length using the chalk line, fold fabric back and under leaving fabric 1/2" longer than marked. Refasten the trim to pole along marked line, insuring that the fabric is between the trim and the pole so that screws as fastened along chalk line.
5. Finally trim excess fabric away from the pole with utility knife or scissors and melt together any frayed edges.

Step 8.

Upon completion of drilling and installing all fence panels, they need to be secured with hook and eyes. To attach hook and eyes remove top screw with a 1/4" hex bit. Screw hook in one hole and the eye in corresponding hole on the next panel (a screw driver slipped into eye hole will provide leverage) and latch poles together. In some cases a second hook may be required on the opposite end of fence panels (i.e.: when attaching fence to existing structure). Extra hooks and eyes or poles may be required and not included. Can be purchased from your dealer.

Step 9.

Install plastic post caps using a few drops of all purpose household glue or PVC cement inside cap then sliding over fence post and twisting 1/4 turn to ensure entire surface is covered with glue.

Step 10.

Gates: You can create a gate opening wherever two panels connect by drilling an extra hole on the poolside of the fence 3" away from next closest pole. Place deck sleeve into the hole and you have your new gate. **Also available is a self closing and latching gate.**

ALWAYS KEEP GATE CLOSED AND FENCE FASTENED AT ALL TIMES. IN-GROUND SAFETY FENCE IS NOT INTENDED TO BE A SUBSTITUTE FOR PROPER ADULT SUPERVISION, NOR IS IT A GUARANTEE AGAINST ACCESS TO THE POOL. CHILDREN SHOULD BE WATCHED AT ALL TIMES

WARNING

THERE IS NO SUBSTITUTE FOR ADULT SUPERVISION IN THE SWIMMING POOL ENVIRONMENT!

LIVES DEPEND ON YOU!

- **Layers of protection such as a fence, wall, structure or natural barrier around your pool can help reduce unauthorized use.**
- **Check local building codes to make sure you are in compliance with fencing laws in your area.**

IN-GROUND REMOVABLE SAFETY FENCE IS NOT DESIGNED TO MEET ALL BUILDING CODE STANDARDS AND IS NOT INTENDED TO BE A SUBSTITUTE FOR PROPER PARENTAL SUPERVISION NOR IS IT A GUARANTEE AGAINST ACCESS TO THE SWIMMING POOL
